Mohit

U17 Boys · Fleet size: 52 · Sail #16

FINAL RANK	NETT POINTS	BEST RACE	RACES SAILED / 10
41	345.0	17	10 clean finishes

1 Executive Summary

Mohit competed in U17 Boys at the 2026 Techno 293 World Championships in Foça, Turkey. Final rank: **41 / 52**. This profile consolidates all GPS-derived performance metrics, wind-band specific results, and a 24-category evaluation framework. Data-driven ratings are auto-computed; observational ratings must be filled in by the coach during 1:1 debrief.

2 Wind-Band Performance (A/B/C/D/X)

How this athlete compares to the Class Top 5 **in the same wind condition**. The score is a VMC composite — mean of (UW VMC %, DW VMC %) vs Top 5 in that band. Reach legs are excluded. **100%** = matches Top 5, **80%** ≈ 20% slower toward the next mark. Route Efficiency is intentionally excluded from the composite — following the same route as Top 5 while trailing behind is not a positive signal.

BAND	CONDITION	RACES · AVG FINISH	VMC % OF TOP 5
A	Very Light ≤5 kn	No races	
B	Light 5–8 kn	n=3 Avg Finish: 39.7	86%
C	Medium 9–12 kn	n=2 Avg Finish: 42.0	77% ⚠ low n · ⚠ low-pointing (spd 90%)
D	Strong 13–16 kn	n=3 Avg Finish: 45.3	66% ⚠ 2 nav disaster · ⚠ low-pointing (spd 85%)
X	Heavy 17+ kn	n=1 Avg Finish: 37.0	79% ⚠ low n

HOW TO READ THE PERCENTAGE

The percentage is a **VMC composite** — mean of this athlete's Upwind VMC and Downwind VMC, each compared to the Class Top 5 average in the same wind band. VMC = speed toward the next mark, so this number answers: *"how fast is this athlete progressing toward the mark compared to the top sailors in the same wind?"*

Tier colors: ≥95% gold · ≥85% emerald · ≥75% sky · ≥60% amber · ≥45% orange · <45% red.

Avg Finish is shown next to race count as a ground-truth anchor: when VMC% looks good but Avg Finish is poor, the boat-speed is fine but starts/tactics/shift-calls are the problem. When both are poor, boat speed itself is the limiter.

Flags: ⚠ low n means the sample is n ≤ 2 (treat as noisy); ⚠ nav disaster means one or more races had route efficiency <50% (>2× ideal distance); ⚠ low-pointing means raw speed is ≥5pp higher than VMC — fast but pointing poorly.

3 Strengths & Weaknesses (by Wind Condition)

Strengths and weaknesses are computed **per wind band × per metric** then ranked globally. Band is stated **first** because T293 performance varies sharply with wind — a sailor strong in light air can be weak in 15+ kn. Percentage is the athlete's band mean divided by the Class Top 5 band mean.

▲ Top 3 Strengths

B	**Downwind VMG** Light 5–8 kn · n=3 races	91.6%	★★★★⯪
C	**Upwind VMG** Medium 9–12 kn · n=2 races ⚠ low n	84.5%	★★★⯪☆
B	**Upwind VMG** Light 5–8 kn · n=3 races	78.8%	★★★⯪☆

▼ Top 3 Weaknesses

D	**Downwind VMG** Strong 13–16 kn · n=3 races	70.1%	★★⯪☆☆
D	**Upwind VMG** Strong 13–16 kn · n=3 races	70.7%	★★⯪☆☆
C	**Downwind VMG** Medium 9–12 kn · n=2 races ⚠ low n	75.9%	★★★⯪☆

HOW TO READ THIS CARD

Each row answers: *"In what wind band, for what metric, is this athlete strong/weak vs the Class Top 5?"*

n = number of races the athlete sailed in that band. Bands with **n < 3** are flagged ⚠ low n — the signal is noisier and must be confirmed over subsequent regattas.

The precise **percentage** is always shown; the **5 stars** are a fast visual tier (≥95% = 5★, ≥85% = 4.5★, ≥75% = 3.5★, ≥60% = 2.5★, ≥45% = 1.5★, <45% = 0.5★). Negative percentages are never used — a weakness is a low positive percentage; the gap to benchmark is simply *100 − pct*.

4 17-Category Evaluation Matrix

Data-driven (D2/D4) and GPS-inferred observational (C1/C2/C5, F1–F4) ratings are auto-computed from race data. A1/A2/A4, B1/B2/B3, and E1/E2 (pumping) are coach-rated (HIGH/MID/LOW/N/A) from the Coach Observational Comments master sheet.

Data-Driven Categories (GPS / Sailwave)

CODE	CATEGORY	TIER (★/5)	VALUE
D2	**Upwind VMG** Velocity Made Good to windward — speed × cos(angle to true wind) vs Top 5	★★★½☆	77%
D4	**Downwind VMG** Velocity Made Good to leeward — speed × cos(angle to downwind) vs Top 5	★★★½☆	76%

GPS-Inferred Observational Categories (Auto-Rated)

CODE	CATEGORY	TIER (★/5)	VALUE
C1	**Course Selection Pre-Start** Reads committee boat vs pin bias, wind shifts, current *Side agreement with Top 5 course choice on UW legs · n=7*	★★★★★	89%
C2	**Start Line Positioning** Chooses correct section of line, defends gap, avoids bad lanes *Fleet percentile at first WM rounding (start quality proxy) · n=7*	½☆☆☆☆	16%
C5	**Start Focus & Line Judgement** Timing, line judgement, commitment in final 10 sec *% of starts in top half at first WM (0/7 races) · n=7*	½☆☆☆☆	0.0%
F1	**Tacking Technique** Entry timing, foot work, rig/board balance, exit angle & speed retention *UW VMG % of Class Top 5 — low = tack losses accumulating · n=7*	★★★½☆	77%
F2	**Gybing Technique** Board flattening, rig transfer, carve radius, pumping exit coordination *DW VMG % of Class Top 5 — low = gybe losses / poor DW trim · n=7*	★★★½☆	76%
F3	**Windward Mark Rounding** Layline judgement, traffic management, bear-away + DW acceleration *Mean rank change on DW leg after each WM (lower=better) · n=7*	★★★★½	+2.1%
F4	**Leeward Mark Rounding** Wide-in/tight-out line, daggerboard timing, hardening to close-hauled *Mean rank change on UW leg after each LM (lower=better) · n=7*	★★★★★	-3.0%

Observational Categories (Coach Manual Entry)

CODE	CATEGORY	TIER (★/5)	VALUE
A1	**Attitude & Discipline** Training diligence, respect for team rules, behavior at regatta *Overall bright, cheerful, and positive.*	★★★★★	HIGH
A2	**Physique & Body Build** Height, weight, leverage for fin/rig; suitability for class *Very well suited.*	★★★★★	HIGH
A4	**Learning Attitude** Willingness to review debriefs, ask questions, self-analyze *Proactive learning drive stands out.*	★★★★★	HIGH
B1	**Racing Rules Knowledge** RRS 10-17 application, port/stbd avoidance, mark rounding rules *Not enough information to assess.*	★★★★★	N/A
B2	**Equipment Setup** Mast step, outhaul, downhaul systems *Excellent foundational understanding.*	★★★★★	HIGH
B3	**Condition-based Trimming** Adjusts downhaul/outhaul, daggerboard pivot as wind builds; reacts to gusts *Needs more understanding and experience with daggerboard and track management; trim adjustment speed while sailing is still lacking.*	★★★★★	MID
E1	**Upwind Pumping Technique** T293-legal pumping technique upwind above 6 kn (IWA rule) *Struggles somewhat to deliver power in C condition (9–12 kn) and above.*	★★★★★	MID
E2	**Downwind Pumping Technique** Coordinated body/rig pumping for DW acceleration *Struggles somewhat to deliver power in B–C condition (5–12 kn) and above.*	★★★★★	MID

Tier system: 5★ gold · 4.5★ emerald · 3.5★ sky · 2.5★ amber · 1.5★ orange · 0.5★ red.

GPS-inferred proxies: C1 side-choice match vs Top 5 · C2 fleet percentile at first WM rounding · C5 % of starts in top half at first WM · F1/F2 UW/DW VMG % of Class Top 5 · F3/F4 mean rank change on post-rounding leg (≤1% = gold, >15% = red).

5 Training Prescription — Next 90 Days

Prioritized by gap size to Class Top 5 benchmark and observational gaps.

1 **Close the Downwind VMG gap (76% → 90%)**

Drill: Angle-vs-speed optimization — soak low in pressure, plane high in lulls; S-turn gybe drills 10–15 kn; daggerboard-up positioning; surfing practice in swell

Target: Reach 90% of Class Top 5 in Downwind VMG within 6 months

2 **Build confidence in D-band conditions (66% of Top 5, n=3 races)**

Drill: Strong-wind speed and pointing 13–16 kn: hiking endurance, daggerboard-up upwind, gust response, fin choice, downhaul

Target: Close the gap to 85% in D-band races through focused training camps

3 **Complete all 18 observational ratings (A1–F4)**

Drill: Schedule 1:1 debrief with head coach; review MetaSail replays from Foça; self-assess with video

Target: Full 24-category evaluation matrix completed by end of April 2026
