

Master Debrief Dashboard

Team India · 2026 Techno 293 World Championships · Foça, Turkey · Apr 5–9, 2026

0 Executive Summary

8 athletes · 4 classes · 38 class-race samples · Foça 2026

Team India fielded 8 athletes across 4 Techno 293 classes (U15 Boys, U15 Girls, U17 Boys, U17 Girls) at the 2026 World Championships in Foça, Turkey. This dashboard consolidates all GPS-derived performance metrics against Class Top 5 references and drills into wind-band specific strengths and weaknesses. All values are expressed as percentage of Class Top 5, with tier-colored visual encoding.

OVERALL ASSESSMENT

Team India shows strongest relative performance in **B-band light wind (5–8 kn)** at 85.7% of Top 5, and weakest in **C-band medium wind (9–12 kn)** at 66.0% of Top 5. The C band was the dominant condition at this event and represents the #1 training priority. Individual results: U15 Girls Vaishnavi achieved the best single-race finish (8th/23). U17 Girls Tejasvi and Rashmita have limited GPS data and should be re-evaluated with MetaSail replay.

4 Championship Score Table

Official final rankings vs class fleet size. Click "View Profile" to open the full 20-category evaluation. Tier colors by percentile: gold ≥ top 10%, emerald ≥ top 25%, sky ≥ top 50%, amber ≥ top 75%, orange bottom 25%, red bottom 10%.

10 Detailed Performance Table — Gap vs Class Top 5

All Team India athletes vs Class Top 5, sorted best → worst by reliability-adjusted composite **Avg Gap**. Each cell: **mean ± SD** (kn) over the athlete's valid races, and tier-colored gap % vs Top 5 below. **Avg Gap** = mean of **Avg VMC / UW VMC / DW VMC** gaps — VMC (velocity toward next mark) is the quantity that actually determines race finish, unlike raw speed which can be fast in the wrong direction. Route Efficiency is intentionally excluded — "same route as Top 5 while trailing behind" is not a positive signal. **±facet SD** below Avg Gap shows how evenly the gap is distributed. Sort applies a small-n penalty so a 1-race sample can't rank a sailor as "elite" on luck.

ATHLETE	CLASS	AVG GAP	AVG SPEED	AVG VMG	AVG VMC	UW VMG	UW VMC	DW VMG	DW VMC

Gap vs Class Top 5 → ■ ≥ -5% Elite ■ -5 to -15% Strong ■ -15 to -25% Developing ■ -25 to -40% Gap ■ -40 to -55% Large Gap ■ < -55% Critical

How to read: All percentages are **gap vs Class Top 5** (e.g. -20% = 20% behind Top 5 pace). The **Avg Gap** column = mean of Avg VMC / UW VMC / DW VMC gaps. Route Efficiency is intentionally NOT part of the composite (same route ≠ strength if trailing behind). **Why VMC instead of raw speed?** Race finishing position is determined by how fast you close distance to the *next mark*, not by how fast your GPS needle moves. VMC measures exactly that. A sailor with high raw speed but low VMC is over-sheeted / low-pointing — fast in the wrong direction. The **UW VMG / UW VMC** and **DW VMG / DW VMC** pairs let you diagnose this directly: when VMG ≫ VMC the sailor is pointing poorly vs the mark, when VMC ≫ VMG current or shift is helping them. The **±facet SD** below each Avg Gap shows whether the gap is uniform (low SD) or one facet is dragging (high SD = clear training priority on that facet). **n** = races used. Small n is penalized in sort order so a 1-race sample can't be "elite" on luck. Prioritize coaching on the cells with the largest negative gap AND highest SD — those are both slow *and* inconsistent.

12 Growth Potential — 4-Quadrant Scatter

X = **Time Penalty vs Top 5 (%)** — how much longer it takes this athlete to cover the same course, combining speed AND route efficiency. 0% = identical to Top 5 pace; +100% means they take double the time. Y = **Fleet Position Percentile**. **Upper-right = best**.

How to read: X is the true performance gap — a slow sailor on a straight line is still slow. Right side = pace matches Top 5 (good); ↑ upper = finish positions near the top of the fleet. Athletes in the upper-right corner are closest to Top-5 performance. Far-left points are >2× slower than Top 5 over the same course.

TRAINING RECOMMENDATION

#1 PRIORITY — This is Team India's weakest wind condition. Allocate the most training volume here. Focus on fundamentals: board trim, pumping technique, tacking angles specific to this wind range.

HOW THIS SCORE IS CALCULATED

Composite formula: $\text{mean}(\text{UW VMC } \%, \text{DW VMC } \%)$ vs Class Top 5 in the same wind band. Route Efficiency is intentionally **not** part of this composite — "same route as Top 5 while trailing behind" is not a positive signal. A sailor who follows the fleet's tactical line but loses boat-speed to them shows up as good on route-eff and bad on VMC, and VMC is what determines the finish order.

Why VMC only: VMC (Velocity Made on Course) measures speed toward the next mark — the physically correct race-outcome metric. Both UW VMC and DW VMC are built only from **upwind and downwind legs** — reach legs (single-tack legs with no tactical choice) are **excluded by design**, so a good pure-speed sailor with weak pointing cannot inflate their band score.

Speed-vs-VMC gap: each athlete card shows both the VMC composite (main number) and raw avgSpd% (smaller, below). When $\text{avgSpd}\% \gg \text{VMC}\%$, that sailor is fast but points poorly — a diagnosis of low-pointing. When they are close, speed is the real limiter.

Avg Finish vs VMC gap (ground truth anchor): each card also shows the sailor's average Sailwave finish position in this band. When the VMC% looks strong but Avg Finish is poor, the problem is not boat speed — it's starts, tactics, shift calls, or mental execution. When both are poor, the boat speed itself is the limiter.

Small samples ($n \leq 2$): cards are dimmed and dashed — a 2-race average has a standard error of ~5pp, so small differences between low-sample athletes are statistical noise. Sorting order already applies a $-5/n$ reliability penalty so a small-n sample cannot outrank a large-n sample without meaningful margin.

Route-efficiency outlier flag: any single race with route_eff <50% (sailed >2× ideal distance) is flagged as a tactical disaster. It is kept in the average but marked so the reader can weight it appropriately.

Per-Class Performance Radars

1 8-Axis Performance Radar · U15 Boys (Vihaan, Udaiveer)

% of Class Top 5 on 8 axes (UW VMC, UW Speed, DW Speed, DW VMC, DW VMG, DW TWA, UW TWA, UW VMG). Based on 10 races.

COACHING INSIGHT

U15 Boys (Vihaan, Udaiveer) strongest axis: **DW TWA** (95.6% of Top 5). Weakest axis: **DW VMC** (63.2% of Top 5). Training focus should prioritize the weakest axis to close the gap.

1 8-Axis Performance Radar · U15 Girls (Priyanshi, Vaishnavi)

% of Class Top 5 on 8 axes (UW VMC, UW Speed, DW Speed, DW VMC, DW VMG, DW TWA, UW TWA, UW VMG). Based on 10 races.

COACHING INSIGHT

U15 Girls (Priyanshi, Vaishnavi) strongest axis: **DW TWA** (96.7% of Top 5). Weakest axis: **UW VMC** (73.2% of Top 5). Training focus should prioritize the weakest axis to close the gap.

1 8-Axis Performance Radar · U17 Boys (Mohit, Soham)

% of Class Top 5 on 8 axes (UW VMC, UW Speed, DW Speed, DW VMC, DW VMG, DW TWA, UW TWA, UW VMG). Based on 9 races.

COACHING INSIGHT

U17 Boys (Mohit, Soham) strongest axis: **DW TWA** (98.4% of Top 5). Weakest axis: **UW VMC** (71.0% of Top 5). Training focus should prioritize the weakest axis to close the gap.

1 8-Axis Performance Radar · U17 Girls (Tejasvi, Rashmita)

% of Class Top 5 on 8 axes (UW VMC, UW Speed, DW Speed, DW VMC, DW VMG, DW TWA, UW TWA, UW VMG). Based on 9 races.

COACHING INSIGHT

U17 Girls (Tejasvi, Rashmita) strongest axis: **DW TWA** (92.4% of Top 5). Weakest axis: **UW VMC** (37.2% of Top 5). Training focus should prioritize the weakest axis to close the gap.

Per-Class TWA Polar, Course Bias & Speed Breakdown

16 Long-Term Development Plan — YAI (Yachting Association of India)

Multi-year athlete development plan for YAI submission. **Current level (2026 Foça baseline):** approx. 3rd in Asia (T293 Youth & Junior classes). **Annual competition calendar:** fixed at 3 international championships per year — Asian Championships + European Championships + World Championships. Youth pipeline: T293 → iQFOiL transition begins at U17 level, aligned with LA 2028 Olympic windsurfing class (iQFOiL).

Year 1 2026-07 → 2027-06

Foundation & Gap Closure

- Close C-band (9-12 kn) gap — highest training priority from Foça data
- Minimum 80 on-water days/year per athlete; 40+ days in racing conditions
- Quarterly assessment using this 20-category evaluation framework
- **Fixed annual calendar: Asian Championships + European Championships + World Championships** (3 international championships/year, every year)
- Establish video/GPS analysis pipeline with weekly debriefs
- Physical conditioning: targeted hiking/core/endurance program

Year 2 2027-07 → 2028-06

Specialization & T293+ Transition

- U15 athletes continue T293 Junior; U17 athletes transition to T293 Plus
- Identify 2 athletes for iQFOiL foiling introduction (LA 2028 class pathway)
- Target: **Asian Ch. podium (Top-3)**; Worlds: best athlete ≤ Top 30% of fleet, 2+ athletes ≤ Top 25%
- Same annual competition calendar: **Asian + European + World Championships**
- Establish strength/endurance testing battery (ISAF sports science protocols)
- Monthly training camps at venues with varied wind conditions
- Second coach upgrade to IWA Level 2 certification

Year 3 2028-07 → 2029-06

Elite Pathway & Olympic Feeder

- Top 2 athletes enter iQFOiL Youth program (LA 2028 legacy class)
- Target: **Asian Ch. Gold** in at least one class; Worlds: best athlete ≤ Top 20%, 4+ athletes ≤ Top 25% of fleet
- Full-time coach + sports scientist + physiotherapist support
- Same annual competition calendar (Asian + European + World Championships) + Europe-based training block between European and World Championships
- Formal talent ID pipeline feeding from State associations to national squad

Year 4-5 2029-07 → 2031-06

LA 2028 Legacy → Brisbane 2032

- Transition best athletes to Senior iQFOiL squad
- Target: Brisbane 2032 Olympic qualification; senior athletes continue the **Asian + European + World Championships** annual calendar
- Replicate T293 pipeline with next generation (current U11s), feeding them into the same 3-championship annual calendar from U13 level
- Establish National Sailing Academy with permanent residential coaching
- India hosts at least 1 international regatta/year to build racing culture

KEY SUCCESS METRICS — PERCENTILE-BASED (FLEET-SIZE INDEPENDENT)

Worlds performance is measured as **percentile of class fleet** (lower = better) so the target does not drift with fleet size. Baseline data below are official Sailwave ranks from 2026 Foça World Championships.

HORIZON	WORLDS — BEST ATHLETE	WORLDS — TEAM MEDIAN	WORLDS — DEPTH (# ATHLETES ≤ TARGET)	ASIAN CHAMPIONSHIPS
Baseline 2026 Foça (actual result)	Udaiveer 64th %ile (23/36 U15B)	≈ 83rd %ile	0 athletes in Top-30% · 0 in Top-10%	≈ 3rd in Asia (estimated)
Year 1 — 2027	≤ Top 50%	≤ Top 60%	≥ 2 athletes inside Top 40%	4+ athletes Top-10; hold Asian Top-3
Year 2 — 2028	≤ Top 30%	≤ Top 50%	≥ 2 athletes inside Top 25% · ≥ 4 inside Top 40%	Asian Ch. podium (Top-3) in at least 1 class
Year 3 — 2029	≤ Top 20%	≤ Top 40%	≥ 4 athletes inside Top 25%	Asian Ch. Gold in at least 1 class
Year 5 — 2031	≤ Top 10% (podium contender)	≤ Top 30%	≥ 2 athletes inside Top 10% (medal range) · ≥ 6 inside Top 25%	Multi-class Asian Ch. podium; 1+ athlete on senior iQFOiL Olympic-qualification pathway
<i>Top-10% thresholds at 2026 Foça fleet sizes: U15B (36) → Top-4 · U15G (23) → Top-2 · U17B (52) → Top-5 · U17G (39) → Top-4. Youth Olympic Games target removed from plan — the 1-athlete-per-country quota combined with very low participation makes it a low-value benchmark; focus stays on percentile at Worlds + Asian Championships results + senior iQFOiL Olympic pathway.</i>
